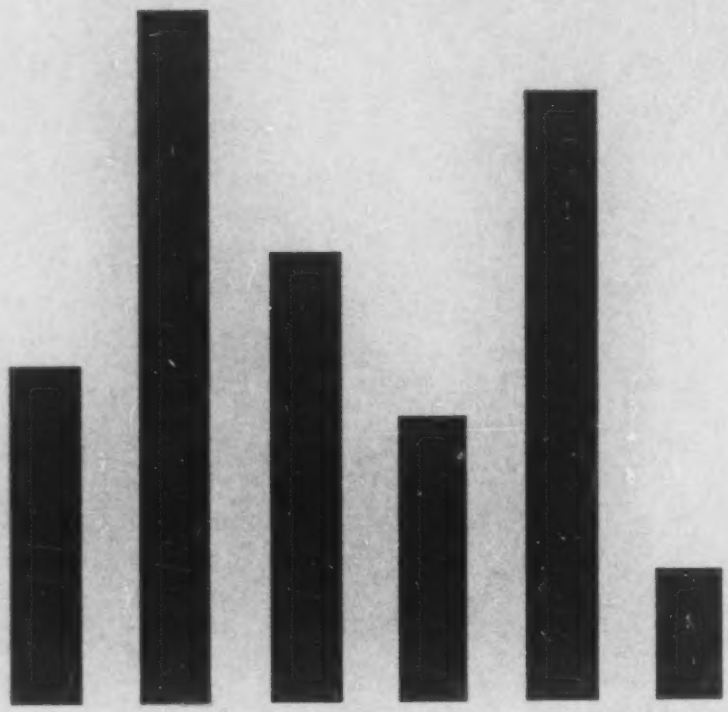
NEBRASKA PUBLIC LIBRARY PROFILE

1986-87 STATISTICAL DATA



Nebraska Library Commission

March, 1989

PUBLIC LIBRARY PROFILE

Introduction

This summary of library statistics is based upon data reported by Nebraska public libraries for the 1986-87 reporting period. The report is very similar to the previous year's statistical report, and includes:

-Reports on library services, resources, income and expenditures, arranged by library system with system and statewide totals.

-A summary of the above data arranged in eight categories of population size. The summary includes the lowest, highest, average and total figures reported in each population group, and for all libraries reporting. Averages for such derived categories as per capita rates and ratios between categories of data may have limited statistical validity; it may be preferable to use the total rates for those categories of data.

-An index by library name, with an indication of library system and population served for reference to those tables.

This report has added new items of data, including borrower registration, interlibrary loan data, and assessed property valuation of the political subdivisions supporting the libraries. The ratios between property valuation of local tax support provides one measure of local library support but should be used with caution. Because property valuation data was not readily available for townships, the property valuation used for township libraries is actually that of the municipality within the township, and valuation rates for municipalities and counties are not comparable on a per capita rate.

A copy of the statistical files used in this report is available on diskette. Those files are in Lotus 1-2-3 format and require an IBM compatible microcomputer with 640k memory capacity. Copies may be requested from:
